AIR-EAGLE® XLT PLUS High Power 900MHz RF Receiver MODEL 461-5000-DC

DESCRIPTION

The AIR-EAGLE XLT PLUS is an RF system designed for long range wireless remote control of electrical apparatus in a variety of industrial applications. Systems can consist of any number of receivers and handheld or contact input transmitters working together. The "461" series of receivers feature built-in repeating capability. They will listen for all transmissions from the control transmitter, perform commands if necessary and pass all commands on to any receiver within range. This receiver is equipped with 3 independent relays, capable of switching 5 amps @ 120VAC or 30VDC, which can be directly interfaced with the customer's equipment or P.L.C. Seven user selectable frequencies allow multiple systems to be used in the same area. The Air-Eagle XLT Plus can receive remote signals transmitted from up to 5000 feet away (with a handheld transmitter) or up to 10 miles away (with a stationary transmitter and external high gain antennas).

INSTALLATION

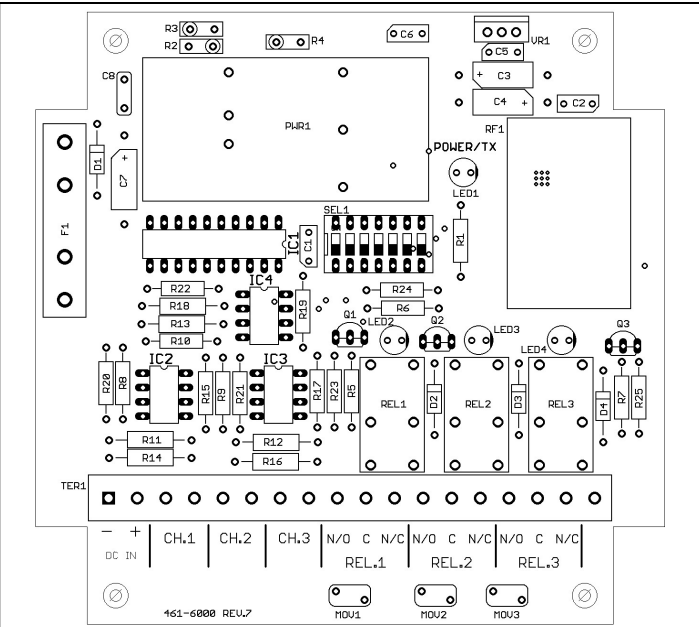

1. Mount the AIR-EAGLE XLT PLUS RECEIVER in a convenient location.
2. Install relay control wiring to the terminal strip.
3. Attach rubber duck antenna or coax from external antenna to connector on side of enclosure.
4. Connect DC power to the proper terminals in your control circuit.
